

COUPON GO:

a lecture on combinatorial game theory

by Prof. Elwyn Berlekamp

2 PM Saturday, March 23
Harvard University (SOCH building)

Free to public!

Coupon Go is a variation upon Go, the classic East Asian board game. Besides adding stones to the board, players can choose to add points to their final score by taking 'coupons' from an ever-dwindling stack.

Join us as Prof. Berlekamp explains how the calculation of precise move values improves our understanding of Go endgames – and how well professional Go players have fared playing Coupon Go.
